Object : KKDIK Regulation - Information letter

Applicable to customers buying PE, PP, PS or EPS produced by TotalEnergies in Europe and importing these products into Turkey:

According to Kimyasalların Kaydi, Değerlendirilmesi, İzni ve Kısıtlanması Hakkında Yönetmelik, No: 30105 ("KKDIK Regulation"), which came into force on December 23rd 2017, substances, on their own or in mixtures, imported into Turkey in quantities equal to or greater than 1 ton/year, will have to be registered before December 31st 2023.

TotalEnergies has thus assessed the composition of the above mentioned polymers which are imported into Turkey and identified the list of substances which fall under KKDIK registration obligation. As a consequence, TotalEnergies did a pre-registration for different substances through an Only Representative.

TotalEnergies is contacting the suppliers of the substances which are pre-registered in order to inform them about the KKDIK regulation and requesting them to enter a registration dossier before December 31st 2023. In this respect, we are currently working with our suppliers to ensure compliance with the KKDIK-regulation.

Sincerely,

Dimitri Pevenage
HSE Product Manager
